To whom it may concern:

I am very excited to apply as an aerospace engineer at your great institution. I am currently a high school senior at Ripon High School, and I believe that my leadership experience and willingness to learn make me a great candidate for this position. My interest in engineering propels me to keep improving in this field, and being hired would be a great honor.

Aerospace engineers focus on the design, development, and creation of aircraft and spacecraft, some of the most advanced technology in the United States. Contributing to such an impactful sector of engineering motivates me to apply for this position. I've always been one to go above and beyond in my work. My attributes as a determined, ambitious worker, and experience on local community projects set myself apart from my peers.

My great interest in the scientific world and success in mathematics help me fit the requirements of this job. I've taken many challenging courses, including AP Calculus and college-level physics, preparing me for a future in this profession. Also, I am motivated by my father, who is currently a civil engineer at the San Joaquin Irrigation District in Manteca. His profession inspires me to follow in his footsteps.

In everything I do, I always fully commit to it, no matter what. Based on my traits listed above, and my background as an exceptional mathematics and science student, I feel I am best fit for this job. My interest in the field of aerospace engineering propels me to learn more about this subject matter and continue to grow. I look forward to speaking with you further.

Sincerely,

Anthony Sausedo
