To whom it may concern:

I am very excited to apply as an industrial engineer at your great institution. I am currently a high school junior at Ripon High School, and I believe that my leadership experience and willingness to learn make me a great candidate for this position. My interest in engineering propels me to keep improving in this field, and being hired would be a great honor.

Industrial engineers work extensively to optimize complex processes through improving assets and creating more efficient systems. Being able to provide such a significant service is something I want to do. I've always been one to go above and beyond in my work. My attributes as a determined, ambitious worker, and experience on local community projects set myself apart from my peers.

My great interest in the scientific world and success in mathematics help me fit the requirements of this job. I've taken many challenging math courses that have elevated me to the next level. Also, I am motivated by my father, who is currently a civil engineer at the San Joaquin Irrigation District in Manteca. His profession inspires me to follow in his footsteps.

In everything I do, I always fully commit to it, no matter what. Based on my traits listed above, and my background as an exceptional mathematics and science student, I feel I am best fit for this job. My interest in the field of industrial engineering propels me to learn more about this subject matter and continue to grow. I look forward to speaking with you further.

Sincerely,

Anthony Sausedo
